# PURAN

# Seawater RO Membrane PNSW-8040XLE-440

#### **Description**

Puran XLE series seawater RO membrane elements have stable salt rejection rate of 99.7%. It can be used for seawater desalination, desalination of brackish water with high concentration, boiler replenishment water in power plants, wastewater reuse, concentration and recovery of high value-added substances such as food and pharmaceuticals, etc.

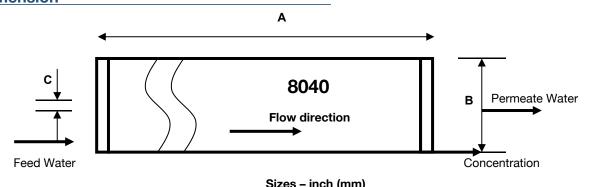

#### **Features**

- Seawater membrane sheet
- > High salt rejection rate
- > Stable performance with long life.

### **Typical Applications**

- Seawater desalination.
- Wastewater treatment.
- Salty water reuse.

## **Dimension**

| Sizes - Ilicii (Ililii) |        |           |  |
|-------------------------|--------|-----------|--|
| Α                       | В      | С         |  |
| 40(1016)                | 8(200) | 1.125(29) |  |

### **Technical Parameters**

| Model              | PNSW-8040XLE-440                       |                               |
|--------------------|--|-------------------------------|
| Specification      | Average rejection rate                 | 99.7%                         |
|                    | Boron rejection rate                   | 90%                           |
|                    | Permeate flow                          | 12100gpd(45.8m³/d)            |
| Туре               | Configuration                          | Spiral wound                  |
|                    | Outer wrap                             | Glass Fiber                   |
|                    | Membrane material                      | Composite Polyamide           |
|                    | Membrane area                          | 440ft² (41m²)                 |
| Application limits | Maximum applied pressure               | 1200psi (8.28MPa)             |
|                    | Maximum chlorine concentration         | 0.1 ppm                       |
|                    | Maximum operating temperature          | 113 °F (45°C)                 |
|                    | Feedwater pH range continuous working  | 2.0 - 10.0                    |
|                    | Maximum feedwater turbidity            | 1.0 NTU                       |
|                    | Maximum feedwater SDI (15 mins)        | 5.0                           |
|                    | Maximum feed flow                      | 85GPM (19.0m <sup>3</sup> /h) |
|                    | Maximum pressure drop for each element | 13psi(0.09MPa)                |

<sup>\*</sup> The limitations shown here are for general use. Operating at more conservative values for specific projects may ensure the best performance and longest life of the membrane.

## **Test Condition**

The stated performance is for the initial data taken after 30 minutes of operation, based on the following test conditions:

- > 32000 ppm NaCl solution
- > 800psi (55.2bar) applied pressure
- > 77°F (25°C) operating temperature
- > 7-8 pH range
- 8% permeate recovery

#### Note

Permeate flow for individual elements may vary +15% or -15%. All membrane elements are supplied with a brine seal, interconnector, and o-rings. Elements are enclosed in a sealed polyethylene bag containing less than 1.0% sodium meta-bisulphate solution and 10% propylene glycol, and then packaged in a cardboard box.
